

English communication

By Mathieu Perochon

Let's start the project

Final Mission : By group of 2 people, develop a project that implements all of the concepts in this course.

Requirements :

- Use Kubernetes through minikube
- Containerize an application of your choice (you can develop it if you want)
- Provide a deployment manual with all necessary files (you can go far with Kubernetes API, it's recommended)
- Provide a report of your project (quick summary, project planning, issues, explain the approach....)
- **Reminder : at each next course, you will present your advances**

Final presentation

Goal : You'll have 2-3 minutes to pitch your project (it's alone) and 2-3 minutes of questions by canadian people.
